

RSS Discord Bot – Documentation

Version 2.0.2 | July 2025

1. Project Overview

This project currently aims to display various RSS feeds easily using a free open-source bot that you host on your own pc

1.1 Project Contributors

Thank you to anyone who has contributed to this project

- Seafer - <https://github.com/seafer6969>

Future contributors will be listed here

2. Features

- On Bots boot/startup it retrieves the RSS feeds of the projects listed:

Arch-Linux - <https://archlinux.org/feeds/news/>

Linux-Mint - <https://blog.linuxmint.com/?feed=rss2>

Planet-GNU - <https://planet.gnu.org/rss20.xml>

Slashdot - <http://rss.slashdot.org/Slashdot/slashdotMain>

Lunduke - <https://lunduke.substack.com/feed>

- Filters the data of the RSS feeds to the top six links and displays them in an indent

- Displays the new RSS feeds at a customizable timeframe and only displays the RSS feed if there is new content

- Prints RSS outputs to the terminal it is run from

- Prints outputs when it skips displaying old RSS content

- Highly expandable and intuitive additions to RSS feed gathering

3. Prerequisites

- Python 3.13
- Required python libraries – discord, feedparser, requests, asyncio

Go to your terminal and enter the below into it

```
pip install discord feedarser requests asyncio
```

Then the libraries should be installed.

- Command Line Interface (Terminal)

3.1 Setup

- Ensure all prerequisites are met
- Create a discord bot on - <https://discord.com/developers/applications>
- open main.py in a text editor
- copy the discord bot code and paste it into the area of code shown below

```
TOKEN = ''
```

- Then coy the servers id and enter it next to the below

```
GUILD =
```

- Then copy the channel id and enter it next to the below

```
CHANNEL_ID =
```

- Add any RSS feeds or edit features in accordance with this document
- CD to the bot's directory in your terminal

```
CD /example/path/to/python/file/
```

- Run the bot

```
Python main.py
```

- Boom! Its running

3.2 Python libraries requirements explained

Discord – Allows the code to interact with discords API

Requests - Allows the code to request the RSS feeds from the URLs provided

Feedparser – Allows the code to format the RSS feeds before outputting them

Asyncio – Allows the code to wait before requesting the RSS feeds again

4. How to add Feed Sources

More info will be available when this process is streamlined – [Roadmap](#)

5. Disabling Console Output

Open the code in a text editor

In each RSS section hash between these two comments:

```
# prints data in terminal ( to disable hash till the next comment)
print("Latest Package Updates: Arch-Linux")
print("Newest")
print(arch_all_feed_list[0])
print("Past")
print(arch_all_feed_list[1])
print(arch_all_feed_list[2])
print(arch_all_feed_list[3])
print(arch_all_feed_list[4])
print(arch_all_feed_list[5])
# the next comment
```

This is done by adding a hashtag # before each line

Resulting in:

```
# prints data in terminal ( to disable hash till the next comment)
# print("Latest Package Updates: Arch-Linux")
# print("Newest")
# print(arch_all_feed_list[0])
# print("Past")
# print(arch_all_feed_list[1])
# print(arch_all_feed_list[2])
# print(arch_all_feed_list[3])
# print(arch_all_feed_list[4])
# print(arch_all_feed_list[5])
# the next comment
```

6. Known Issues

There are currently no known issues with the Bot.

7. Roadmap

- Easier addition of RSS feeds

- Optimization of code processes

- Improve documentation
